Profile Summary

Computer Science and Data Science undergraduate with a strong interest in programming, data science, and software development. Passionate about developing practical solutions to real-world problems through programming, data-driven approaches, and technology-based projects.

Education

Ballari Institute of Technology and Management

B.E. in Computer Science Engineering and Data Science

9.2/10 CGPA

Nandi City PU College

PUC

2022 – 2024

86%

Projects

Travel Budget Splitter — Group Trip Planner

- Developed a Python-based group trip planning application to record, manage, and split travel expenses among multiple participants.
- Implemented expense calculation and individual contribution tracking to simplify settlement of shared trip costs.
- Designed the application to organize trip-related expenses and provide a clear breakdown of each member's share.
- **Skills:** Python, File Handling, Data Processing

Railway Gate Automation

- Developed an Arduino-based railway gate automation system to automate gate operation when a train approaches a railway crossing.
- Integrated ultrasonic sensors with servo motors to detect approaching objects and control the opening and closing of the railway gate.
- Added a buzzer-based alert mechanism to provide warnings during gate operation and improve the safety of the system.
- **Skills:** Arduino, C/C++, Ultrasonic Sensor, Servo Motor, Buzzer

Technical Skills

Languages: C, Python, Java
